

MAPLES ACADEMY, KHATAULI

Khatauli, District Muzaffarnagar, Uttar Pradesh – 251201

Proposal for the Establishment of the Maples Tech Club

*and for the registration of the school with the free institutional technology programmes of Google,
Microsoft, GitHub and the Government of India*

Submitted to	The Principal Maples Academy, Khatauli District Muzaffarnagar, Uttar Pradesh
Submitted by	Harsh Class XII · Roll No. 13 Student of this school, and proposer of the club
Date	12 October 2026
Subject	Permission to start a technology club in the school, and to register the school for the free technology programmes it already qualifies for
Cost to the school	₹0 in licence fees. One teacher, and two hours of laboratory time a week.

What this document contains

Letter of application	The request itself, in four short sections
Executive summary	The whole proposal on a single page
Annexure A	Club charter: definition, purpose, structure and activities
Annexure B	Every benefit, with the official link against it
Annexure C	Registration roadmap, documents and costs
Annexure D	How members will be selected
Annexure E	Governance, safeguards, budget and measurable outcomes
Annexure F	Evidence and official references

MAPLES ACADEMY, KHATAULI

Khatauli, District Muzaffarnagar, Uttar Pradesh — 251201

APPLICATION FOR PERMISSION TO ESTABLISH THE MAPLES TECH CLUB

and to register the school for free institutional technology programmes offered by Google, Microsoft, GitHub and the Government of India

To	The Principal Maples Academy, Khatauli District Muzaffarnagar, Uttar Pradesh	Date	12 October 2026
From	Harsh , Class XII, Roll No. 13 Maples Academy, Khatauli Proposer of the club	Subject	Permission to start a technology club in the school, and to register the school for the free technology programmes it is eligible for

Respected Sir,

1. Introduction

With due respect, I beg to state that I am **Harsh** of **Class XII, Roll No. 13**, a student of this school. I am writing to ask your permission for something I have prepared carefully, and which I believe the school will benefit from.

I want to start a technology club in our school. In this application I have called it the **Maples Tech Club**. There are three parts to my request, and I would ask you to read them together, because it is the second part that makes the first one valuable to the school.

2. The three requests

- Permission to start the Maples Tech Club.** It would meet once a week, under a teacher appointed by you, and teach students of Classes VI to XII computer science, artificial intelligence, robotics and electronics, design, cyber safety and digital media. The teaching would be done by building things. Explaining would come second.
- Permission to register the school with the education programmes run by Google, Microsoft and GitHub.** These companies give schools software, cloud storage and official email addresses **free of cost**. So does Canva, and so does the Government of India in its own way. But they give it only to schools that apply for it. Our school qualifies today, already owns the domain name these companies ask for, and has simply never applied. The club would do the paperwork and then look after the accounts afterwards, under the teacher you appoint.
- Permission for a small founding group to set the club up.** To begin with I am asking only for myself and my friend **Vidhan of Class XII**, together with two to four other students chosen by the test described in Annexure D. Four to six of us in all. I will run the setting-up myself. Once the club is standing on its feet, it passes to its elected President and members, and the rest of the school is admitted in the ordinary way.

Almost every free offer in this application depends on one thing: the school having a **domain name of its own**, so that teachers and students can be given addresses like **name@mapleskhatauli.com**. **Our school already owns mapleskhatauli.com**. That is the difficult and expensive part already done. What has not been done is using it. Once that domain is verified with Google as belonging to a recognised school, Google Workspace for Education, Microsoft 365 Education, GitHub Education and a long list of paid software become free for our teachers and students, lawfully, and for as long as we remain a school.

To switch these benefits on, somebody at the school has to do two things. **First**, verify our educational eligibility with Google using our official domain, **mapleskhatauli.com**. **Second**, set up the **Google Admin Console**, which is the control panel from which student and teacher accounts are created, data privacy is managed, and it is decided which

apps each class may use. Neither step costs anything. Both are described step by step in Annexure C. I am asking that a teacher be named as **Coordinator** to hold this responsibility, and the club will do the work under him.

What I am actually asking for

I am not asking the school to spend any money at all. Because we already own *mapleskhatauli.com*, there is no domain to buy. Everything listed in Annexure B is free to verified schools. What I need from you is **permission, one teacher as Faculty Advisor** to supervise our sessions, **one teacher as Coordinator** to hold the Google Admin Console (it may be the same person), and the computer laboratory for **two hours a week**.

3. Why this matters in the present session

I am not asking for this only because I am interested in computers. The Board has already moved on it. **CBSE Circular Acad-15/2026 dated 1 April 2026** launched the Board's Curriculum Framework for Computational Thinking and Artificial Intelligence for **Classes III to VIII, with effect from the present session, 2026-27**, and **Circular Acad-18/2026 dated 9 April 2026** released the student and teacher resource books for it. At the senior level Artificial Intelligence already exists as a skill subject, under code 417 for Classes IX and X and code 843 for Classes XI and XII. The **National Education Policy 2020** asks that coding be introduced from the Middle Stage. Each of these is listed with its official source in Annexure F.

What that means for us is simple. The school is already expected to teach this, in this session. A club does not replace the curriculum, but it gives the school a place where the practical half of it can actually happen, and it costs nothing to run.

Nor would we be the first. Under the Atal Innovation Mission, the Government of India has set up about **10,000 Atal Tinkering Labs** in schools across **722 districts**, each school receiving a grant of up to ₹20 lakh. Schools in our own district already run them, Grain Chamber Public School and The Doon Valley Public School in Muzaffarnagar among them. They are ordinary schools. What they have that we do not is an application on file.

Outside school, colleges and employers have started asking students what they have actually built. A student who has built something can answer that question. Marks alone cannot.

As I am in Class XII and will be leaving the school in a few months, my own benefit from this will be limited. The long-term value is for the juniors, who will have years of it, and for the school, which is at present without something it may have for almost nothing.

I have tried to keep this application practical rather than impressive. The annexures give the club's rules, an honest list of every benefit with the official website address against it so that you can check each claim yourself, the registration steps with the documents and costs involved, how members will be chosen, the code of conduct they will sign, and the targets the club should be judged against after one year. If it has not met them by then, I have written down that it should be closed.

4. Why I am the one making this request

Why me, and not somebody else

I am not claiming to be the best student in the school. What I can say is that nobody else has done this particular work. I found these programmes, read the eligibility rules for each one, checked which of them a K–12 school in India can use, and listed the ones that do not apply to us instead of hiding them. The website for this club, the posters and this application were all made by me. I am asking for the job because the work is already done and I am the one who did it. If somebody can carry it better, I will hand it over and stay on as a member.

5. What I need from the school and the management

One thing is beyond me. The domain *mapleskhatauli.com* and the present school website are handled by the management, or by whoever built the site. **I would request you to kindly speak to the management**, so that the Coordinator can be given access to the domain settings. Without that, nothing in Annexure C can begin. It costs nothing.

6. Safeguards, and your authority over this proposal

I have tried to answer the obvious objections before they are put to me. Studies come first, and the club stops entirely in the four weeks before any examination. The school owns every account created under its domain, and the administrator passwords stay with you and the Coordinator, never with a student. The laboratory is never used without a teacher present. Nothing is published in the school's name without the Faculty Advisor approving it in writing. These are set out in full, objection by objection, in Annexure E.

Nothing here is fixed. The name, the timings, the number of members, the way they are selected, the posts, the rules, any of it may be changed or struck out as you think proper. I have written it out in full only so that you have something definite to correct rather than a vague idea. Your decision on any point will be final.

I therefore request you to kindly grant permission for the Maples Tech Club, and to allow the registrations described here to be started. I would be grateful for a few minutes of your time to explain it in person whenever it suits you. I give my word that the club will work within the timings, rules and discipline of the school.

Thanking you, and hoping for a favourable reply.

Yours obediently,

Harsh
Class XII · Roll No. 13
Maples Academy, Khatauli

Mobile

Countersigned, Proposed Faculty Advisor

Name

Designation

Signature

Executive Summary

The school is asked to permit a student technology club, and to register itself for the free education programmes of Google, Microsoft, GitHub and Canva. The school already owns the one thing those programmes require, a domain name of its own, and there is no licence fee at any stage.

S.1 What is being asked

1. **Permission** to form the Maples Tech Club for Classes VI to XII, meeting once a week.
2. **Permission to register the school** with Google, Microsoft, GitHub and Canva using *mapleskhatauli.com*.
3. **A founding group of four to six students** to set it up: Harsh and Vidhan of Class XII, and two to four others chosen by the selection in Annexure D.

S.2 What the school gives, and what it receives

What the school gives	What the school receives
Permission, in writing.	Official school email on <i>mapleskhatauli.com</i> for every teacher and student, under the school's own control.
One Faculty Advisor to supervise one session a week.	Google Workspace for Education Fundamentals : Classroom, Meet, Drive, Docs and a central Admin Console.
One Coordinator to hold the Google Admin Console. It may be the same teacher.	Microsoft 365 Education A1 : Word, Excel, PowerPoint, Teams and 1 TB of OneDrive per user.
The computer laboratory, two hours a week , outside teaching hours.	GitHub Education and Canva for Education for teachers and students.
The Principal's signature on the sign-up forms, and the domain login.	A school website built and maintained by students, and the school's social media run under the Faculty Advisor's written approval.
₹0 in licence fees, now or later.	Eligibility to apply for an Atal Tinkering Lab grant of up to ₹20 lakh .

S.3 Why in this session

CBSE Circular Acad-15/2026 brought Computational Thinking and Artificial Intelligence into Classes III to VIII from the session now running, 2026-27. The club gives the school a place for the practical side of that requirement at no cost. Sources in Annexure F.

S.4 Safeguards

- Nothing at all in the four weeks before any examination, and nothing during the boards.
- The school owns every account. Administrator passwords stay with the Principal and the Coordinator jointly, never with a student.
- The laboratory is never used without a teacher present.
- Nothing is published in the school's name without the Faculty Advisor approving it in writing.
- No contract, and no obligation to pay for anything at a later date.

S.5 How to judge it after one year

Annexure E sets eleven measurable targets for the first year. If the club has clearly not met them after twelve months, I have written down that it should be closed.

Club Charter — Definition, Purpose, Structure and Activities

A.1 Identity

Name of the club	Maples Tech Club (MTC)
Institution	Maples Academy, Khatauli, District Muzaffarnagar, Uttar Pradesh
Motto	<i>Learn it. Build it. Ship it.</i>
Nature	A student club of the school. It is not commercial and not political, and it works under a teacher nominated by the Principal.
Open to	All students of Classes VI to XII, from every stream, whether or not they know anything about computers. No student will be turned away from an open session because of stream, marks, gender or background.
Proposed by	Harsh, Class XII, Roll No. 13
Meeting pattern	One session of two hours a week. I would suggest Saturday, after the last period. Members may also use the computer laboratory for project work during hours the school permits.

A.2 What the club is — a definition

The club is a **workshop, not another class**. The rule I want to build it on is that at the end of every term, each member should have something they made themselves. A working web page. A small program. A robot that moves. A poster, a short film, a chart drawn from real data. Theory gets taught when it is needed for the thing being made. The club will not repeat the syllabus. It will use it.

The club would also **look after the school's digital work**. Once the registrations in Annexure C are done, members would help maintain the school website, the official email accounts, the Google Classroom sections, and the photographs and videos from school functions. Always under the faculty advisor. That way the school gets something back every week for the two hours it gives us.

A.3 Vision and Mission

Vision

No student should leave Maples Academy having only *read* about technology. They should leave having *made* something with it.

What the club promises to do:

- Teach computing, AI and electronics by doing, free of cost, to any student of this school who wants to learn.
- Get hold of the free technology our school is entitled to, and look after it properly, so that the benefit reaches every student and teacher, not just club members.
- Train juniors so that the club keeps running after its seniors have left, including after I have left.
- Enter the school's name in competitions, olympiads, hackathons and national innovation challenges.
- Do real work for the school: the website, notices, results, event photography, posters and records.
- Teach students to use computers and AI safely and honestly, and take a firm line against copying.

A.4 Purpose — the nine objectives

#	Objective	Why it matters to Maples Academy
1	Close the gap between syllabus and practice	CBSE now examines Artificial Intelligence and Information Technology as skill subjects. A student who has written code and run it understands the paper much better than one who has only learnt it by heart.
2	Get the school the free digital infrastructure it qualifies for	Official school email, cloud storage, Google Classroom and Microsoft Teams cost the school nothing, but only if it registers. The club does the registering and then the upkeep.
3	Give every member a verifiable portfolio	Work put up publicly is something a student can show to a college, a scholarship committee or an employer. Marks by themselves no longer make anyone stand out.
4	Build a self-sustaining peer-teaching chain	Members of Classes XI and XII teach Classes VI to X. So the club does not fall apart when its seniors pass out, and no extra teaching load falls on the staff.
5	Represent the school externally	Taking part, and winning, in olympiads, science fairs, hackathons and innovation challenges brings a name to the school and to Khatauli.
6	Digitise and support school operations	A website that is kept up to date, an online notice board, digital forms, event photographs and a results page. Done by students, checked by staff, without paying an agency.
7	Run the school's presence online	With your permission the club will set up and look after the school's official pages on Facebook, Instagram and the other platforms you approve, and will design the posters and notices for Annual Day, Sports Day, Science Exhibition, admissions and every other school function. Nothing is posted and nothing is printed without the Faculty Advisor approving it in writing first. This work is presently either not done at all or paid for outside; the club will do it free.
8	Teach digital safety and AI ethics	Students are already using AI and social media anyway. Teaching them properly about privacy, safe behaviour online, false information and honest work protects the school as much as the student.
9	Widen career horizons	Many students here will never hear about careers in software, data, design or hardware unless someone shows them, along with the free national platforms that teach these subjects.

A.5 Organisational structure

Authority comes from the Principal to the Faculty Advisor, and only then to students. No student office-bearer handles money or discipline.

#	Office	Held by	Responsibility
1	Patron	The Principal	Gives permission, approves the year's plan and any outside participation, and has the final word on everything.
2	Faculty Advisor	One teacher nominated by the Principal	Present at every session. Signs every letter that leaves the club. Responsible for discipline, attendance and the safety of the members.
3	Coordinator	One teacher nominated by the Principal. May be the same person as the Faculty Advisor.	Holds the Google Admin Console and all administrator passwords, jointly with the Principal. Is the school's verified contact for Google, Microsoft, GitHub and Canva. Creates and closes accounts, and is answerable for data privacy and for which apps each class may use.
4	Core Committee	6 students of Classes XI–XII	President, Vice-President, Secretary, Technical Lead, Design and Media Lead, Outreach Lead. They plan the sessions, keep the attendance register and report to the advisor every month.
5	Squad Leads	6 students, one per domain	Decide the week's work for their own squad and guide its members.
6	Core Members	Selected students, Classes VIII–XII	Attend regularly, finish their term project, teach juniors and represent the school outside.
7	Open Members	Any student, Classes VI–XII	Come to the open workshops and awareness sessions. There is no selection for this.

A.6 The six domain squads

Squad	What members learn	A typical term project
Web & App Development	HTML, CSS, JavaScript, Git and GitHub, hosting, responsive design, basic databases	The official Maples Academy website and an online notice board
Artificial Intelligence & Data	Python, data handling, charts and statistics, introductory machine learning, prompt literacy, AI ethics	A data study of school attendance or an image classifier trained on a small dataset
Robotics, IoT & Electronics	Circuits, sensors, Arduino, micro:bit, 3D design and printing, automation	An automatic water-level alarm or a line-following robot for the science exhibition
Design & Digital Media	Graphic design, typography, poster and magazine layout, photography, video editing	The complete visual identity and coverage of the Annual Day
Cyber Safety & Digital Citizenship	Passwords and two-factor authentication, phishing and fraud, privacy, safe social media, fact-checking	A school-wide digital safety awareness drive and a parents' handout
Competitive Programming & Logic	Problem solving, algorithms, data structures, olympiad and aptitude preparation	A school coding contest and entry to national olympiads

A.7 Annual calendar

Term	Period	Focus	Deliverable
Term I	April – June	Recruitment, induction, fundamentals, digital hygiene	Every new member publishes a first small project
Term II	July – September	Squad specialisation; the school website goes live	Live school website; inter-house coding contest
Term III	October – December	Competitions, science exhibition, hackathon participation	TechFest Maples — an open exhibition for parents and feeder schools
Term IV	January – March	Board-exam-light term: documentation, peer teaching, handover	Annual report to the Principal; election of the next Core Committee

Examinations. The club will not meet during the four weeks before any school examination, and not at all during the board examination period. Attending the club will never be accepted in place of schoolwork. If a member's marks fall, the Faculty Advisor will keep that member out of the club until they come up again.

Schedule of Benefits — What Registration Actually Gives the School

Everything listed here is a programme run by the organisation named against it. I have not estimated or guessed any of it, and none of it asks the school to sign a paid contract. The official web address is given in every row so that the school can check it before agreeing to anything.

B.1 What the school itself gets

Programme	What Maples Academy receives	Eligibility	Cost
Google Workspace for Education Fundamentals edu.google.com/workspace-for-education	Official school Gmail on our own domain for every student and teacher; Google Classroom; Meet; Drive; Docs, Sheets, Slides, Forms and Sites; Calendar and Chat; a central Admin Console giving the school full control over every account; pooled cloud storage for the institution.	Accredited K–12 schools recognised by CBSE, ICSE or a State Board. Verification by Google.	FREE
Microsoft 365 Education (Office 365 A1) microsoft.com/education/products/office	Web and mobile Word, Excel, PowerPoint, Outlook and OneNote; Microsoft Teams for classes; 1 TB of OneDrive storage per user; SharePoint; School Data Sync; unlimited staff and student licences.	Accredited academic institutions, after academic verification by Microsoft.	FREE (A1 tier)
GitHub Education — Teachers & Schools github.com/education	GitHub Classroom for distributing and auto-grading assignments; the GitHub Teacher Toolbox of professional developer tools; free GitHub Team with unlimited private repositories for verified teachers; free hosting for the school website via GitHub Pages.	A currently employed teacher at an accredited institution, verified with a school email address and faculty identification.	FREE
Canva for Education canva.com/education	The complete Canva Pro feature set for verified K–12 teachers and, through them, their students: premium templates, brand kit, background remover and classroom assignment tools, for school notices, magazines and event design.	Verified K–12 teachers and their schools. Students receive access through a teacher-created class.	FREE
Optional: .edu.in domain ERNET India, MeitY, Govt. of India registry.ernet.in	Not needed for anything above. We already own <i>mapleskhatauli.com</i> and every programme here accepts it. A .edu.in address only adds standing, marking the school as a recognised academic body. ERNET India, under MeitY, is the exclusive Government registrar. Worth considering later, never first.	Primary and secondary schools affiliated to CBSE, ICSE or a recognised State Board.	≈ ₹1,180 per year (incl. GST; cheaper in multi-year blocks)
Atal Tinkering Laboratory Atal Innovation Mission, NITI Aayog aim.gov.in	A Government grant-in-aid of up to ₹20 lakh per school — ₹10 lakh for establishing the laboratory (3D printer, robotics and electronics kits, sensors, microcontrollers, tools) and ₹10 lakh towards operating expenses over five years.	Schools with Classes VI–XII that can spare the built-up space. Applications open in announced windows.	GRANT to the school
Cisco Networking Academy netacad.com	Free, industry-recognised curricula in networking, cybersecurity, Python and IoT, with instructor training and student certificates of completion.	Schools and teachers enrolling as an academy.	FREE
Autodesk Education / Tinkercad autodesk.com/education	Free educational licences for professional design and engineering software, and Tinkercad — free browser-based 3D design, circuits and block coding designed for school classrooms.	Students and educators at accredited institutions; Tinkercad classrooms are open to schools.	FREE

B.2 What each student and teacher gets

These become available to our students once the school has its own email domain, because nearly all of them check eligibility through an institutional email address.

Programme	What a Maples student receives	Eligibility
GitHub Student Developer Pack education.github.com/pack	A large bundle of professional developer software, cloud credits, domain names and learning subscriptions contributed by dozens of technology companies, free for the duration of the student's verified enrolment.	Aged 13 or above, currently enrolled in a degree- or diploma-granting programme, which expressly includes school students . Verified by school email or by a photograph of the school identity card.
Figma for Education figma.com/education	Free access to Figma's paid design and prototyping platform, including FigJam whiteboards — the industry standard for interface design.	Verified high-school students and educators, using a school-issued email address. Renewed annually.
JetBrains Educational Licence jetbrains.com/.../education	The full suite of JetBrains professional programming environments, free for the duration of study and renewable each year.	Students and teachers at accredited institutions, verified by academic email address or ISIC card.
Notion for Education notion.com/.../notion-for-education	The Notion Plus plan free for individual students and teachers — notes, project planning, club documentation and knowledge management.	Students and educators verifying with an education email address.
Microsoft Learn & MakeCode learn.microsoft.com/training	Free structured learning paths in programming, cloud computing, data and AI; MakeCode provides block-based coding for micro:bit and Minecraft.	Open to all; progress and achievements are tracked against the account.
Google for Education learning tools csfirst.withgoogle.com · grasshopper.app	CS First provides free, ready-made computer-science lesson plans for school clubs; Google's Applied Digital Skills and Be Internet Awesome cover digital literacy and online safety.	Free and open to schools and clubs worldwide.
Free open learning platforms code.org · scratch.mit.edu · freecodecamp.org · kaggle.com/learn · cs50.harvard.edu · swayam.gov.in · skillsbuild.org	Complete, free curricula from Code.org, MIT Scratch, freeCodeCamp, Kaggle Learn, Harvard CS50, the Government of India's SWAYAM and NPTEL, and IBM SkillsBuild, many of them with certificates.	Free and open; certificates typically require only free registration.
Artificial intelligence tools academy.openai.com · gemini.google · copilot.microsoft.com	OpenAI Academy offers free AI-literacy courses worldwide, including a K–12 educator track. The free tiers of ChatGPT, Google Gemini and Microsoft Copilot are available for supervised classroom demonstration. Google periodically offers Indian students extended AI plans at no cost.	Free tiers are open to all. Note: OpenAI's dedicated free <i>ChatGPT for Teachers</i> plan is presently restricted to verified U.S. K–12 educators and is not yet offered in India; Google's student AI offers generally require the user to be 18 or above. The club will use only what is lawfully and freely available here.

One thing I want to be honest about

I have marked the two limitations above instead of leaving them out. Two offers that are talked about a great deal, OpenAI's free teacher plan and some of Google's AI plans for students, are restricted by country or by age and would not apply to us at present. As far as I have been able to check, everything else in this annexure is available to an Indian CBSE school right now. Even so, please have each one verified on the official link before the school commits to it. I would rather be corrected now than have the school rely on something I have got wrong.

Registration Roadmap — Sequence, Documents, Costs and Owners

Google, Microsoft and GitHub identify a school by its **domain name**, and we already own *mapleskhatauli.com*. What follows is mostly form-filling, and the school may stop after any phase.

#	Action	Documents required	Owner	Time	Cost
0	Permission The Principal approves the club and names the Faculty Advisor and the Coordinator.	This application, and a line in writing from the Principal naming the two teachers.	Principal	1 week	Nil
1	Prove we own the domain Add the short verification record Google gives us. Nothing about the existing website or its email changes.	The login for wherever <i>mapleskhatauli.com</i> was bought. The office, or whoever built the present website, will have it. The one thing to confirm before starting.	Coordinator, with the club	1–2 days	Nil
2	Verify our eligibility with Google Fill the Education Fundamentals sign-up on <i>mapleskhatauli.com</i> so Google records us as a recognised school.	School name, type, website, strength, address and telephone · the verified domain · a scan of the affiliation certificate · a contact email not on the school domain.	Coordinator	2 weeks	FREE
3	Set up the Google Admin Console Create teacher and student accounts, group them by class, switch on the privacy and filtering settings, and decide which apps each class may use.	A list of staff and students by class. Nothing else. The Console is the school's permanent control panel; the Principal and Coordinator hold the passwords.	Coordinator, with the club	1 week	FREE
4	Microsoft 365 Education Start the education sign-up, get through Microsoft's academic check, then hand out the free A1 licences.	The school domain · administrator details · proof that we are a school, if the automatic check does not clear it.	Coordinator	1–2 weeks	FREE
5	GitHub Education A teacher applies and opens GitHub Classroom. Students then apply for the Student Pack.	School email address · a photograph of the teacher's identity card, or a letter confirming employment · for students, the school identity card.	Coordinator, then members	1 week	FREE
6	Canva for Education and the other programmes that need a teacher to verify. Then give out accounts to staff and students.	School email address and teacher verification.	Coordinator	1 week	FREE
7	Refresh the school website on our existing domain, built and looked after by the club's Web squad.	All text and photographs approved by the school first. Hosting is free on GitHub Pages.	Club, supervised	3–4 weeks	FREE

What the school actually pays

Nothing. Not one rupee. All eight phases are free, because the domain is already ours and every programme in Annexure B is free to verified schools. The two paid items in Annexure B are optional and the school need never take either.

Member Selection Process

The club will have **two doors**, and that is deliberate. Some selection is needed to keep project teams small enough to actually teach. But selection must never turn into a way of keeping students out of learning.

Open Track — no selection at all	Core Track — selected membership
Any student of Classes VI to XII can attend the club's open workshops, awareness sessions, guest talks, exhibition days and competitions. No test, no form, no previous knowledge and no limit on numbers. This is how most of the school will meet the club, and it is the club's main job.	A limited number of students are taken into the squads each year. They get regular guidance, laboratory time for their projects, team work and the chance to represent the school outside. In return they accept rules about attendance, conduct and teaching juniors.

D.1 How the first members are chosen

Two steps. An online test to shortlist, then one project to decide. No form to buy, no interview panel, no probation period and no fee.

Before the club exists there is nobody in it to run an intake, so I will conduct this first selection myself, **on behalf of the School Coordinator** and under whatever supervision you direct. Afterwards the President and Core Committee take it over.

Step	What happens	What is being judged	Weight
1 Online test	25 questions in 30 minutes , set as a Google Form, so it can be sat on a phone or a laboratory computer and marked automatically. Objective questions on basic technical skills : simple logic and patterns, elementary computer awareness, reading instructions correctly, ordinary arithmetic. No programming is required and none is assumed. Open to Classes VI to XII and marked class-wise, so a junior is never compared with a senior.	Clear thinking and care in reading. Not technical knowledge, and not speed.	40%
2 A project	Everyone who clears the test makes one thing, of their own choosing . No list, no fixed subject: a poster, a web page, a game, a working circuit, a short film, a model, a useful spreadsheet, a piece of writing about technology. One week, handed in with a few lines on what it is and what went wrong while making it. Beginners' attempts are expected and welcome.	Effort, and whether the student finished what they started. How polished it looks counts for very little.	60%
	Results go up on the school notice board. A student who is not selected stays a full Open Track member and may try again at the next intake.	—	—

D.1.1 The founding group

A club cannot be built by a crowd on the first day. I am asking that it start with **four to six students**: myself, my friend **Vidhan**, and two to four others from the top of the selection above. We will set up the accounts, write the first sessions and get the routine working, after which the club opens to the whole school. Vidhan is in Class XII with me, so we both leave at the end of this session. That is exactly why I ask that **the remaining founding places go to students of Classes VIII to X**. They will have the club for years after we have gone, and they, not us, are the ones who will really run it.

D.2 Principles binding the selection

- **No fee of any kind** for applying, or for being a member.

- **Previous experience is not a condition.** A complete beginner who finishes a simple task will be placed above an experienced student who submits nothing.
- **Places kept aside.** At least **40% of the places in every intake go to Classes VI to IX**, so the club keeps renewing itself. Girl students will be actively encouraged to apply.
- **Marks are not a condition either.** What matters is whether a student can keep up with the club without their studies suffering, and the Faculty Advisor decides that.
- **Everything is put up in advance.** The criteria and their weights go up before the intake starts, and any student who is not selected will be told, if they ask, what would make their next attempt stronger.
- **The Faculty Advisor can overrule** any selection or removal decision, and the Principal's decision is final in every case.
- **Not being selected does not mean being shut out.** Such a student stays a full Open Track member and can attend every workshop the club holds.

D.3 Continuing membership and removal

Core membership is renewed every term on three conditions: at least 70% attendance, the term project finished, and conduct found satisfactory. The Faculty Advisor may remove a member for indiscipline, for misusing school equipment or the internet, for copying, or for breaking the code of conduct. In every such case the student will be heard first, and the matter will be reported to the Principal.

D.4 Code of Conduct — to be signed by every member

Every selected member signs this when they join. The Faculty Advisor keeps the signed copy.

I, a member of the Maples Tech Club, undertake that —
1. My studies come first. I will not allow club work to affect my attendance, homework or examinations, and I accept that the Faculty Advisor may keep me out of the club at any time if my marks start falling.
2. I will respect school property. I will use the computer laboratory, its machines, the internet connection and all equipment carefully, only for club purposes, only during permitted hours, and never without a teacher present.
3. I will be honest in my work. I will not copy another person's work and present it as mine. Where I use code, images, designs or text made by somebody else, including anything produced by an artificial intelligence tool, I will say so clearly. I understand that handing in AI output as my own work counts as copying.
4. I will keep the school safe online. I will not share my school account password, will not attempt to access any account or system that is not mine, will not install unapproved software, and will not visit or share inappropriate, pirated or unlawful material.
5. I will publish nothing in the school's name without approval. No website change, notice, poster, photograph, video or social media post representing Maples Academy will be issued by me without the prior written approval of the Faculty Advisor.
6. I will protect others' privacy. I will not photograph, record or publish any student or teacher without their knowledge and consent, and I will not share anyone's personal data.
7. I will teach what I learn. I will help juniors and new members willingly, and I will not mock or discourage a beginner. Every member of this club started by knowing nothing.
8. I will conduct myself with courtesy towards teachers, staff, visitors and fellow students, in the club and when representing the school outside it.
9. I accept the authority of the Faculty Advisor and the Principal in all matters concerning the club, and I understand that breach of this undertaking may result in my removal from the club and in action under the school's ordinary disciplinary rules.

Governance, Safeguards, Budget and Measurable Outcomes

E.1 Safeguards — addressing the school's legitimate concerns

Concern	Safeguard offered
Will studies suffer?	One session a week, after school hours. Nothing at all in the four weeks before any examination, or during the board examinations. If a member's marks fall, the Faculty Advisor keeps them out until they recover.
Who controls the accounts and data?	The school does. The school owns the domain and every account made under it. The administrator passwords stay with the Faculty Advisor and the Principal. No student gets administrator rights. Accounts are switched off when a student leaves. Google Workspace for Education and Microsoft 365 Education are built for exactly this kind of control, through a single admin console.
Will students misuse internet access?	The laboratory is never used without a teacher present. Every member signs the code of conduct. Content filtering is switched on at administrator level for all school accounts. Anything that goes wrong is reported to the Principal the same day.
Is the school's reputation at risk online?	Nothing goes out in the school's name without the Faculty Advisor approving it in writing first. That covers the website, notices, posters, photographs and social media. Photographs of students are only put up with their consent.
What if the founder leaves after Class XII?	The structure is built against exactly that. Every squad has a junior deputy. The Core Committee is elected fresh every year in Term IV. All records, passwords and project files are handed to the Faculty Advisor before the outgoing batch leaves.
What if the Faculty Advisor or the Coordinator leaves the school?	This is the more serious risk of the two, because the accounts are in the teacher's name. Three things protect against it. The Principal holds the administrator passwords jointly with the Coordinator , so access is never lost with one person. The accounts belong to the school's domain and not to any individual, so a new teacher is simply made administrator in the same console. And a written handover of passwords, records and files is required before either teacher is relieved, exactly as it is for the outgoing students.
Will this cost the school money later?	The free plans named in Annexure B are these companies' standing education offers. There is no obligation to upgrade to a paid plan, and the school can stop using any of them whenever it wants. No contract ties the school to paying anything later.
Is AI use appropriate for school students?	The club teaches students to <i>understand</i> AI: what these systems are, where they get things wrong, how to check them, and why handing in their output as your own work is dishonest. All of it is supervised, on approved free plans. Under the club's rules, submitting AI work without saying so is treated as copying.

E.2 What the club requests from the school

Seven requests, each a separate thing. Six of them cost nothing. The seventh is optional and the club will run without it.

#	Request	Detail	Cost
1	Formal sanction	Permission to start the Maples Tech Club as a recognised club of the school.	Nil
2	One Faculty Advisor	A teacher named by the Principal, preferably from Computer Science, Mathematics or Physics, to supervise one session a week.	Nil
3	One Coordinator	A teacher named by the Principal, who may be the same person, to verify the school with Google using <i>mapleskhatauli.com</i> , to hold the Google Admin Console, and to be the school's contact for Google, Microsoft, GitHub and Canva.	Nil

#	Request	Detail	Cost
4	Computer laboratory access	Two hours a week outside teaching hours, and occasional extra time when we are preparing for a competition.	Nil
5	Notice board space	A small permanent corner of a notice board for our announcements and results.	Nil
6	Papers and logins, handed over once	Three things, all one-time: the Principal's signature and stamp on the sign-up forms; copies of the affiliation and registration certificates, which Google, Microsoft and GitHub ask for; and the login for wherever <i>mapleskhatauli.com</i> was bought, so that Google's verification record can be added. The school office, or whoever built the present website, will have the last of these.	Nil
7	Optional consumables budget	Entirely optional. Basic electronics parts, jumper wires, sensors, printing and materials for the exhibition. The club will also look for sponsorship, and will run without this if the school would rather not spend it.	₹3,000 – ₹6,000 / yr (optional)

E.3 Measurable outcomes for the first year

I request that the club be checked against these after twelve months, and closed without any argument from me if it has clearly not met them.

By the end of Year One	Target
mapleskhatauli.com verified with Google and school accounts live	Yes
Official school email accounts issued to teachers and to Classes IX–XII	100%
Google Workspace for Education and Microsoft 365 Education active	Both
Official school website live, built and maintained by students	Yes
Students attending at least one club session	150 +
Core members with a completed, documented project	40 +
Workshops and awareness sessions conducted	20 +
External competitions or olympiads entered	3 +
Teachers trained in Google Classroom or Microsoft Teams	10 +
Public technology exhibition for parents and the community	1
Licence cost to the school for all software obtained	₹0

In closing

Every school in the country is being told to go digital. Most are waiting for someone to give them the means to do it. Maples Academy does not have to wait. It already qualifies for all of this, and it has students who are willing to do the work. I am asking for permission, one teacher, and two hours a week.

Harsh, Class XII, Roll No. 13

Evidence and Official References

Nothing in this application rests on my word. Every requirement and every benefit named has a published source, listed below, so that the school may check it independently before acting on anything.

F.1 Curriculum and policy requirements

Reference	What it establishes	Where to verify
CBSE Circular Acad-15/2026 1 April 2026	Launches the CBSE Curriculum Framework for Computational Thinking (CT) and Artificial Intelligence (AI) for Classes III to VIII, session 2026-27 , aligned to NEP 2020 and NCF-SE 2023.	cbseacademic.nic.in (Circulars, April 2026)
CBSE Circular Acad-18/2026 9 April 2026	Releases the Student and Teacher Resource Books for CT and AI, Classes 3 to 8, on the CBSE academic website.	cbseacademic.nic.in (Circulars, April 2026)
CT and AI Student Handbook, Class 6 First edition, March 2026	The Board's own handbook, prepared with IIT Madras, IIT Gandhinagar, MNIT Jaipur, NITTTR Bhopal and Azim Premji University. Covers AI basics, data, pattern recognition and digital ethics.	cbseacademic.nic.in web_material / CurriculumMain27
Artificial Intelligence, Subject Code 417	AI as a skill subject for Classes IX and X , with published curriculum, theory and practical scheme.	cbseacademic.nic.in (Skill education curriculum)
Artificial Intelligence, Subject Code 843	AI as a skill elective for Classes XI and XII .	cbseacademic.nic.in (Skill education curriculum)
National Education Policy 2020	Asks that activities involving coding be introduced in the Middle Stage, and that the Secondary Stage curriculum include computer science along with Artificial Intelligence.	education.gov.in (NEP 2020, Part I, School Education)

F.2 Schools already working this way

The school is not being asked to try something untested. Two kinds of evidence are offered: the national scale of the government's own scheme, and schools in this district running it already.

Evidence	What it shows	Where to verify
Atal Tinkering Labs Atal Innovation Mission, NITI Aayog	About 10,000 Atal Tinkering Labs established in schools across 722 districts of India. Selected schools receive a grant of up to ₹20 lakh , spread over five years, for robotics, electronics, 3D printing and IoT equipment. Open to CBSE, ICSE and State Board schools, government or private, running Classes 6 to 12.	aim.gov.in pib.gov.in (press releases)
Schools in Muzaffarnagar district	Grain Chamber Public School, Muzaffarnagar, and The Doon Valley Public School, Muzaffarnagar, both publicly run Atal Tinkering Labs under the same mission. These are ordinary district schools, not metropolitan ones. The school office can confirm this locally.	Publicly listed ATL schools; verifiable locally

F.3 Programme eligibility, in the providers' own words

Programme	Who it is for	Official source
Google Workspace for Education Fundamentals	Accredited, government-recognised primary and secondary institutions. Free.	edu.google.com/workspace-for-education
Microsoft 365 Education A1	Accredited academic institutions, after academic verification. Free.	microsoft.com/education/products/office

Programme	Who it is for	Official source
GitHub Education	Teachers and students at accredited educational institutions. Free.	github.com/education
Canva for Education	Teachers at accredited K-12 schools, and their students. Free.	canva.com/education
Atal Innovation Mission	Schools with Classes 6 to 12 and a valid UDISE code.	aim.gov.in

A note on checking these

Eligibility rules and the contents of free plans are changed by these organisations from time to time. Everything above was taken from the official sources named, at the time of writing. I would request that the Coordinator confirm each one on the official link before the school signs anything.

Official websites, if you wish to check anything yourself. Google Workspace for Education — edu.google.com/workspace-for-education · Microsoft 365 Education — microsoft.com/education/products/office · GitHub Education — github.com/education · GitHub Student Developer Pack — education.github.com/pack · ERNET India domain registry — registry.ernet.in · Atal Innovation Mission — aim.gov.in · Canva for Education — canva.com/education · Figma for Education — figma.com/education · Cisco Networking Academy — netacad.com · CS First — csfirst.withgoogle.com · OpenAI Academy — academy.openai.com

Prepared by Harsh, Class XII, Roll No. 13, Maples Academy, Khatauli. The details, eligibility conditions and fees given here are the ones published by these organisations at the time of writing, and they do change from time to time. The school is requested to confirm them on the official links above before acting.
