MAPLES ACADEMY, KHATAULI

Khatauli, District Muzaffarnagar, Uttar Pradesh — 251201

APPLICATION FOR PERMISSION TO ESTABLISH THE MAPLES TECH CLUB

and to register the school for the free technology programmes it already qualifies for

To	The Principal Maples Academy, Khatauli District Muzaffarnagar, Uttar Pradesh	**Date**	15 October 2026
From	**Harsh**, Class XII, Roll No. 13 Maples Academy, Khatauli	**Subject**	Permission to start a technology club, and to register the school for free software it is already eligible for

Respected Sir,

I am **Harsh** of Class XII, Roll No. 13. I want to start a small technology club in our school — the **Maples Tech Club** — and, with it, switch on software that Google, Microsoft, GitHub and others already give recognised schools for free. We qualify. We have never applied.

1. **Start the club.** One session a week, after school, under a teacher you name. Open to Classes VI to XII, any stream. We learn by making things — a page, a program, a robot, a poster — not by repeating the syllabus.
2. **Register the school.** The companies above give official email, Classroom, Teams, cloud storage and design tools only to schools that ask. They identify a school by its domain name. **We already own *mapleskhatauli.com*.** That is the hard part. A teacher verifies it once with Google; after that, Workspace, Microsoft 365, GitHub Education and Canva are free for every teacher and student. Annexure B is the list, with the official link against each item. Annexure C is the steps. The club does the paperwork under the teacher you appoint.
3. **Let four to six of us set it up.** Myself, my friend **Vidhan of Class XII**, and two to four juniors from the test in Annexure D. Vidhan and I leave this year, so those extra places should go to Classes VIII to X — they will actually run the club. After the first term it opens to the rest of the school.

What I need from you

No money. Permission; **one teacher** as Faculty Advisor (and, if you wish, as Coordinator for the Google Admin Console — it can be the same person); the computer laboratory for **two hours a week**; and a word to the management so that teacher can add Google's verification record to *mapleskhatauli.com*. Without that last piece, registration cannot start.

I leave in a few months, so this is not for me. It is for the juniors, and because CBSE already treats AI and IT as skill subjects while colleges keep asking what a student has actually built. I found these programmes, dropped the ones that do not apply here, and wrote this application myself. If someone can carry the club better, I will hand it over.

Nothing here is fixed. Change the name, the timing, the numbers, the rules — or strike any of it out. Your decision on every point is final. Annexure E is how you should judge us after a year.

I would be grateful for a few minutes to explain this in person. The club will work inside the school's timings, rules and discipline. Thanking you.

Yours obediently,

Harsh

ANNEXURE A

The Club — What It Is, Who Runs It, What We Do

Name	Maples Tech Club (MTC)
School	Maples Academy, Khatauli, District Muzaffarnagar, Uttar Pradesh
Motto	*Learn it. Build it. Ship it.*
Nature	A student club. Not commercial, not political. A teacher nominated by the Principal is present at every session.
Open to	Classes VI to XII, every stream. Open sessions turn nobody away for marks, gender or background.
Proposed by	Harsh, Class XII, Roll No. 13
When	Two hours, once a week — Saturday after the last period, if that suits the school. No meetings in the four weeks before any examination, and none during the boards.

A.1 The idea

A workshop, not another class. At the end of every term each member should have made one thing themselves. Theory is taught when the thing being made needs it. In return for the two hours, members also help with the school website, notices, photographs and the email accounts — always under the Faculty Advisor. Seniors teach juniors, so the club does not die when Class XII leaves.

A.2 Who is in charge

Authority runs Principal → Faculty Advisor → students. No student handles money or discipline.

Office	Held by	Does
Patron	The Principal	Gives permission. Final word on everything.
Faculty Advisor	One teacher you name	Present at every session. Signs every letter. Attendance, discipline, safety.
Coordinator	One teacher — may be the same person	Holds the Google Admin Console and all admin passwords, jointly with you. Creates and closes accounts. School contact for Google, Microsoft, GitHub and Canva.
Core Committee	Six students, Classes XI–XII	President, Vice-President, Secretary, Technical Lead, Design Lead, Outreach Lead. Plan sessions, keep the register, report monthly.

Office	Held by	Does
Members	Core (selected) and Open (anyone)	Core members finish a term project and teach juniors. Open members come to workshops — no test, no limit.

A.3 Six squads

Squad	They learn	A typical term project
Web & Apps	HTML, CSS, JavaScript, Git, hosting	School website and an online notice board
AI & Data	Python, charts, a first look at machine learning, AI ethics	A small data study, or an image classifier on a tiny set
Robotics & Electronics	Circuits, Arduino, sensors, 3D design	A line-following robot or a water-level alarm for the exhibition
Design & Media	Posters, photography, video, magazine layout	Visual identity and coverage of Annual Day
Cyber Safety	Passwords, phishing, privacy, honest use of AI	A school-wide safety drive and a parents' handout
Programming & Logic	Problem solving, algorithms, olympiad practice	A school coding contest; entries to national olympiads

A.4 The year

Term	When	Focus	Done when
I	Apr – Jun	Recruitment, basics	Each new member publishes one small thing
II	Jul – Sep	Squad work; website	School website live; inter-house coding contest
III	Oct – Dec	Competitions, exhibition	TechFest Maples — open to parents and feeder schools
IV	Jan – Mar	Light term: write-up, teaching, handover	Report to you; next Core Committee elected

ANNEXURE B

What Registration Actually Gives the School

I have not guessed any of this. Each row is a real programme. The official address is there so you can check it before agreeing to anything. None of it is a paid contract.

B.1 For the school

Programme	What we get	Who it is for	Cost
Google Workspace for Education edu.google.com/workspace-for-education	School Gmail on our own domain for every student and teacher; Classroom, Meet, Drive, Docs, Sheets, Slides, Forms; a central Admin Console.	Accredited K–12 schools. Google verifies.	**FREE**
Microsoft 365 Education (A1) microsoft.com/education/products/office	Word, Excel, PowerPoint, Outlook, Teams; 1 TB OneDrive each; unlimited staff and student licences.	Accredited schools, after Microsoft's academic check.	**FREE**
GitHub Education github.com/education	GitHub Classroom, free private repositories for verified teachers, free hosting for the school website.	A teacher at an accredited school, verified with school email.	**FREE**
Canva for Education canva.com/education	Canva Pro for verified K–12 teachers and their students — notices, magazines, event design.	Verified K–12 teachers. Students join through a class.	**FREE**
Atal Tinkering Laboratory NITI Aayog · aim.gov.in	A government grant of up to **₹20 lakh** — kits, a 3D printer, sensors — if we apply in an open window and can spare the space. Optional, and later.	Schools with Classes VI–XII.	**GRANT**

Also free once we have school email, and not listed at length: Cisco Networking Academy, Autodesk / Tinkercad, Figma, JetBrains, Notion, Code.org, Scratch, SWAYAM, NPTEL. A **.edu.in** domain from ERNET (~₹1,180 a year) is optional standing only — nothing above needs it. We already have *mapleskhatauli.com*.

B.2 For each student

These open once a student has a school email address.

Programme	What a student gets
GitHub Student Developer Pack education.github.com/pack	Professional developer tools, cloud credits and learning subscriptions, free while enrolled. Open to school students aged 13+, verified by school email or a photo of the identity card.
Design and coding tools	Figma, JetBrains and Notion Plus, free for verified high-school students and teachers, renewed yearly.
Open courses	Code.org, MIT Scratch, freeCodeCamp, Harvard CS50, SWAYAM, IBM SkillsBuild — many with certificates, none paid.

Two things that do *not* apply to us

OpenAI's free ChatGPT-for-teachers plan is U.S. K–12 only. Some of Google's headline student-AI offers need the user to be 18. I have left both out. Everything else in this annexure, as far as I can check, is available to an Indian CBSE school today. Please still open the official link before the school commits.

ANNEXURE C

The Steps — Sequence, Papers, Time, Cost

Six steps, in this order. The school may stop after any of them.

#	Action	Papers	Who	Time	Cost
0	**Permission.** You approve the club and name the Advisor and the Coordinator.	This application, and a line naming the two teachers.	Principal	1 week	**Nil**
1	**Prove we own the domain.** Add the short record Google gives us. The existing website does not change.	Login for wherever *mapleskhatauli.com* was bought. The office, or whoever built the site, will have it.	Coordinator	1–2 days	**Nil**
2	**Verify with Google** as a recognised school, on that domain.	Name, address, strength, phone; affiliation certificate; a contact email not on the school domain.	Coordinator	2 weeks	**FREE**
3	**Google Admin Console.** Teacher and student accounts, class groups, privacy and which apps each class may use.	A list of staff and students by class. You and the Coordinator hold the passwords.	Coordinator	1 week	**FREE**
4	**Microsoft 365, GitHub, Canva** — same pattern, using the school domain and a teacher's identity.	School email; teacher ID or a letter of employment; for students, the school identity card.	Coordinator	2–3 weeks	**FREE**
5	**School website** rebuilt on the same domain, looked after by the Web squad.	Text and photographs you have already approved. Hosting is free on GitHub Pages.	Club, supervised	3–4 weeks	**FREE**

Compulsory cost of all six steps: **nothing.** The Atal Lab grant and a .edu.in address are optional and later. The school can drop any programme whenever it wants — there is no upgrade trap.

ANNEXURE D

Who Joins, and the Rules They Sign

Two doors, on purpose. Project teams have to stay small enough to teach. That must never become a way of keeping students out of learning. No fee to apply or to belong. Beginners are expected.

Open Track — no selection	Core Track — selected
Any student of Classes VI to XII can come to workshops, talks, exhibition days and competitions. No test, no form, no previous knowledge, no cap on numbers. This is how most of the school will meet the club.	A limited number join the squads each year. They get regular guidance and laboratory time, and they may represent the school. In return: attendance, a term project, and teaching juniors.

D.1 How Core members are chosen

Two steps. No form to buy, no interview, no probation. I will run the first intake myself, under the Coordinator, because the club does not yet exist to run it. After that the elected committee takes over. At least 40% of Core places go to Classes VI to IX. Girl students will be actively asked to apply. Marks are not a condition; the Advisor decides only whether a student can keep up without studies suffering.

Step	What happens	Judged on	Weight
1 Online test	**25 questions, 30 minutes**, a Google Form, sat on a phone or a lab computer. Simple logic, elementary computer awareness, reading instructions, ordinary arithmetic. **No programming.** Marked class-wise, so a Class VI student is never scored against Class XII.	Clear thinking. Not knowledge, not speed.	40%
2 One thing	Everyone who clears the test makes **one thing of their own choosing** in a week: a poster, a page, a game, a circuit, a short film, a model, a spreadsheet, a piece of writing. Handed in with a few lines on what it is and what went wrong. Beginners' attempts are welcome.	Effort, and finishing. Polish counts for very little.	60%

Results go on the notice board. A student who is not selected stays a full Open member and may try again next intake. The Advisor can overrule any selection; your decision is final.

Core membership is renewed each term: 70% attendance, the project finished, conduct in order. The Advisor may remove a member for indiscipline, misuse of equipment or the internet, or copying — after hearing the student, and after reporting it to you.

D.2 Code of Conduct — signed by every Core member

The Faculty Advisor keeps the signed copy.

I, a member of the Maples Tech Club, undertake that —
1. Studies first. Club work will not touch my attendance, homework or exams. I accept being kept out if my marks fall.
2. School property. Laboratory, machines, internet — carefully, for club work, in permitted hours, never without a teacher present.
3. Honest work. I will not copy. If I use someone else's code, image or text, including anything an AI tool produced, I will say so. Handing in AI output as mine is copying.
4. Safe accounts. I will not share my password, touch anyone else's account, install unapproved software, or visit or share anything inappropriate or unlawful.
5. Nothing in the school's name without approval. No website change, notice, poster, photograph, video or social post as Maples Academy without the Advisor's written yes. I will not photograph or publish anyone without their consent.
6. Courtesy, and teaching juniors. I will not mock a beginner. I accept the Advisor's and the Principal's authority. Breach may mean removal, and ordinary school discipline.

ANNEXURE E

Safeguards and One-Year Targets

E.1 The questions you are entitled to ask

Question	Answer
Will studies suffer?	One session a week, after school. Nothing in the four weeks before exams, or during the boards. Falling marks → out, until they recover.
Who owns the accounts?	The school. The domain and every account under it stay with Maples Academy. Admin passwords sit with you and the Coordinator. No student gets administrator rights. Accounts close when a student leaves.
Internet misuse?	No laboratory without a teacher. Code of conduct signed. Content filtering on at admin level. Anything that goes wrong is reported to you the same day.
The school's name online?	Nothing goes out without the Advisor's written approval — website, notices, posters, photographs, social media. Photographs of students only with consent.
What if the founder leaves?	Built for that. Every squad has a junior deputy. The committee is re-elected in Term IV. Records and files go to the Advisor before Class XII leaves.
What if the teacher leaves?	You hold the admin passwords jointly, so access is never in one person's pocket. Accounts belong to the school domain; a new teacher is simply made administrator. Written handover before either teacher is relieved.
Hidden cost later?	These are the companies' standing free education plans. No obligation to upgrade. The school can stop any of them whenever it wants.

E.2 Judge us on this after twelve months

If we have clearly missed these, close the club. I will not argue.

By the end of Year One	Target
mapleskhatauli.com verified; school accounts live	**Yes**
School email issued to teachers and to Classes IX–XII	**100%**
Google Workspace and Microsoft 365 both active	**Both**
School website live, built and kept by students	**Yes**
Students who attended at least one session	**150+**
Core members with a finished, documented project	**40+**
Workshops held · competitions entered · teachers trained on Classroom/Teams	**20+ · 3+ · 10+**
Public exhibition for parents · licence cost to the school	**1 · ₹0**

In closing

Most schools are waiting to be given the means to go digital. Maples Academy does not have to wait. It already qualifies, and it has students willing to do the work.

Harsh, Class XII, Roll No. 13

Prepared by Harsh, Class XII, Roll No. 13, Maples Academy, Khatauli. Fees and eligibility are as these organisations published them at the time of writing; they do change. Please confirm each item on the official link in Annexure B before acting.
